

GENERAL DESCRIPTION

The SGM8557H-1AQ is a low noise, high precision CMOS operational amplifier for automotive applications. It provides a high output current of 230mA and rail-to-rail output operation from a range of 2.7V to 5.5V single supply.

The SGM8557H-1AQ offers low input offset voltage and low input offset voltage drift. The device also can achieve a high 15MHz gain-bandwidth product and a high 7.5V/ μ s slew rate.

The SGM8557H-1AQ is specifically designed to drive high current load, such as 32 Ω headset, V_{BIAS} of RF power amplifier, etc.

The SGM8557H-1AQ is available in a Green SOT-23-5 package. It operates over an ambient temperature range of -40°C to +125°C.

This device is AEC-Q100 qualified (Automotive Electronics Council (AEC) standard Q100 Grade 1) and it is suitable for automotive applications.

APPLICATIONS

AEC-Q100 Grade 1 Applications
Battery-Powered Equipment
Audio System
Optical Module
DAC Buffer
Industrial Equipment

FEATURES

- **AEC-Q100 Qualified for Automotive Applications**
Device Temperature Grade 1
 $T_A = -40^{\circ}\text{C}$ to $+125^{\circ}\text{C}$
- **Output Drive Capability: 230mA**
- **Low Input Offset Voltage: 15 μ V (MAX)**
- **Low Input Offset Voltage Drift: 30nV/ $^{\circ}\text{C}$ (TYP)**
- **Low Noise: 30nV/ $\sqrt{\text{Hz}}$ at 1kHz**
- **Gain-Bandwidth Product: 15MHz**
- **High Slew Rate: 7.5V/ μ s**
- **High Open-Loop Gain ($R_L = 2\text{k}\Omega$): 144dB**
- **Power Supply Rejection Ratio: 120dB**
- **Over-Temperature Protection**
- **No Phase Reversal for Overdriven Inputs**
- **Rail-to-Rail Input and Output**
- **Supply Voltage Range: 2.7V to 5.5V**
- **Quiescent Current: 1.15mA (TYP)**
- **Available in a Green SOT-23-5 Package**

TYPICAL OPERATING CIRCUIT

PACKAGE/ORDERING INFORMATION

MODEL	PACKAGE DESCRIPTION	SPECIFIED TEMPERATURE RANGE	ORDERING NUMBER	PACKAGE MARKING	PACKING OPTION
SGM8557H-1AQ	SOT-23-5	-40°C to +125°C	SGM8557H-1AQN5G/TR	SWJXX	Tape and Reel, 3000

MARKING INFORMATION

NOTE: XX = Date Code.

YYY X X

Date Code - Week

Date Code - Year

Serial Number

Green (RoHS & HSF): SG Micro Corp defines "Green" to mean Pb-Free (RoHS compatible) and free of halogen substances. If you have additional comments or questions, please contact your SGMICRO representative directly.

ABSOLUTE MAXIMUM RATINGS

Supply Voltage, $+V_S$ to $-V_S$	6V
All Other Pins	$(-V_S) - 0.3V$ to $(+V_S) + 0.3V$
Junction Temperature	+150°C
Storage Temperature Range	-65°C to +150°C
Lead Temperature (Soldering, 10s)	+260°C
ESD Susceptibility	
HBM	7000V
CDM	1000V

RECOMMENDED OPERATING CONDITIONS

Operating Temperature Range	-40°C to +125°C
Operating Supply Voltage Range	2.7V to 5.5V

OVERSTRESS CAUTION

Stresses beyond those listed in Absolute Maximum Ratings may cause permanent damage to the device. Exposure to absolute maximum rating conditions for extended periods may affect reliability. Functional operation of the device at any conditions beyond those indicated in the Recommended Operating Conditions section is not implied.

ESD SENSITIVITY CAUTION

This integrated circuit can be damaged if ESD protections are not considered carefully. SGMICRO recommends that all integrated circuits be handled with appropriate precautions.

Failure to observe proper handling and installation procedures can cause damage. ESD damage can range from subtle performance degradation to complete device failure. Precision integrated circuits may be more susceptible to damage because even small parametric changes could cause the device not to meet the published specifications.

DISCLAIMER

SG Micro Corp reserves the right to make any change in circuit design, or specifications without prior notice.

APPLICATIONS INFORMATION

Single-Supply Stereo Headphone Driver

A single-supply stereo headphone driver is shown in Figure 1 as an example to explain the simplified design procedure.

Figure 1. Stereo Headphone Driver

In this circuit, C_{IN} and R_{IN} form a high-pass filter, the DC bias is removed from the incoming signal. The -3dB point of the high-pass filter is using Equation 1:

$$f_{-3dB} = \frac{1}{2\pi R_{IN} C_{IN}} \quad (1)$$

The gain of driver is $-R_F/R_{IN}$. The C_{OUT} and the load impedance form a high-pass filter with the -3dB point determined by Equation 2:

$$f_{-3dB} = \frac{1}{2\pi R_L C_{OUT}} \quad (2)$$

Bridge Amplifier

A bridge amplifier circuit which can provide 200mW at 3V is shown in Figure 2. Due to differential output, this structure eliminates the large coupling capacitors in Figure 1. The voltage gain is 10V/V and the gain can be changed by changing R_2 .

Figure 2. 200mW Bridge Amplifier at 3V

Cancel Input Capacitance

$$C_F = 8 \times (R/R_F) \text{ pF} \quad (3)$$

R_F is the feedback resistor.
 R is the gain-setting resistor.

Figure 3. Inverting and Non-Inverting Amplifiers with C_F to Compensate C_{IN}

For ESD diode clamping protection, when the current flowing through ESD diode exceeds the maximum rating value, the ESD diode and amplifier will be damaged, so current-limit protection will be added in some applications. One resistor is selected to limit the current not to exceed the maximum rating value. In Figure 4, a series input resistor is used to limit the input current to less than 10mA, but the drawback of this current-limit resistor is to contribute thermal noise at the amplifier input. If this resistor must be added, its value must be selected as small as possible.

Figure 4. Input Current-Limit Protection

The SGM8557H-1AQ supports rail-to-rail output operation. In single power supply application, for example, when $+V_S = 5V$, $-V_S = GND$, $2k\Omega$ load resistor is tied from OUT pin to $V_S/2$, the typical output swing range is from $0.008V$ to $4.992V$.

APPLICATIONS INFORMATION (continued)

Driving Capacitive Loads

The SGM8557H-1AQ is designed for unity-gain stable for capacitive load up to 780pF. In Figure 5, it shows the transient response with capacitive load (C_L). If greater capacitive load must be driven in application, the circuit in Figure 6 can be used. In this circuit, the IR drop voltage generated by R_{ISO} is compensated by feedback loop.

Figure 5. Small-Signal Transient Response (Capacitive Load)

Figure 6. Circuit to Drive Capacitive Load

Power Supply Decoupling and Layout

A clean and low noise power supply is very important in amplifier circuit design, besides of input signal noise, the power supply is one of important source of noise to the amplifiers through $+V_S$ and $-V_S$ pins. Power supply bypassing is an effective method to clear up the noise at power supply, and the low impedance path to ground of decoupling capacitor will bypass the noise to GND. In application, 10μF ceramic capacitor paralleled with 0.1μF or 0.01μF ceramic capacitor is used in Figure 7. The ceramic capacitors should be placed as close as possible to $+V_S$ and $-V_S$ power supply pins.
