

■ FEATURE

- 12 bits serial data input(3 wire serial data transfer method, DI, CLK, LD)
- R-2R resistor ladder used for D/A conversion
- 8 channels with 8-bit resolution monotonic D/A converted
- 8 channel buffer operational amplifiers operating in the full voltage range from VCC to GND only if VDD=VCC and VSS=GND
- Max. 2.5 MHz serial digital data input
- Serial I/O for cascade application
- Max. 1.0 mA output drive/sink current
- Two separate power supply/ground lines for system and analog power supply
- Single +5 V system power supply

■ DESCRIPTION

The AA88347AP is a CMOS processed digital to analog converter (DAC) with 8-bit resolution, low leakage current and low operating current. The AA88347AP has 8 channels with build in operational amplifier output buffers which could operate in the full-swing voltage range from VCC to GND and enhance the Drive/Sink ability up to max. 1mA.

Digital data (DI) input serially in a max. 2.5 MHz clock (CLK) rate. The latched 12-bit digital data is converted into an analog DC voltage in the range from VSS to VDD with 8-bit resolution in one of the eight channels by the D/A converter in a max. 100 μ s settling time.

AA88347AP is a single 5V power DAC. Analog DC output could be full voltage swing as the analog power is equal to the system power.

In addition to normal D/A converter applications, AA88347AP is also available for electronic volume and instead of potentiometers for adjustment due to its high stability on the capacitive load.

16 pins TSSOP package type are available for AA88347AP. Its operational temperature range is specified over -20°C to 85°C .

■ **PIN DESCRIPTION**

Symbol	Pin No.	Type	Name & Function
VCC	9	—	+5V system power supply pin
GND	16	—	System ground pin
VDD	8	—	Analog power supply pin
VSS	1	—	Analog ground pin
CLK	13	I	Serial clock input pin. At its rising edge, DI data shift into the Shift-Register.
LD	12	I	Data Strobe pin. When it's on high, upper 4-bit and lower 8-bit of the 12-bit in the Shift-Register be latched into the Address Decoder and the Data-Latch, respectively
Data Input/Output			
D1	14	I	Serial Digital Data input pin
DO	11	O	Serial Digital Data output pin. Output from the 12 th data in the Shift-Register
DAC Output			
AO1	15	O	8-bit D/A converter outputs Output range is from VSS to VDD
AO2	2	O	
AO3	3	O	
AO4	4	O	
AO5	5	O	
AO6	6	O	
AO7	7	O	
AO8	10	O

NOTE: Stress above those listed under “Absolute Maximum Rating” may cause permanent damage to the device. This is a stress rating only and functional operation of the device at these or any other conditions above those indicated in the operational section of this specification is not implied. Exposure to absolute maximum rating conditions for the extended periods of time may affect device reliability.
